

INSITE HANDOFF · START HERE

New-chat orientation at the July 13 head; the Master Plan still loads first | HGF Management Company

Written July 13, 2026, at repository head following the resolution of both open program decisions. Paste-and-go orientation for a fresh session. The Master Plan (00_PLAN/INSITE_Master_Plan.md) is still loaded first on every build run; this handoff is the bridge, not the replacement.

Who and what

Palmer is the builder (computer work only, never a principal, never a document recipient). Dennis Lanni is founder and principal, HGF Management Company, Granite Bay; all documents are prepared for him. INSITE finances development impact fees for 2-to-50-lot California subdivisions through one master community facilities district per agency with administrative annexations, one note per project, a single warehouse credit facility, and an optional pooled bond take-out at stabilization. The name INSITE is a placeholder pending trademark counsel; the knockout memo and Option A decision sit with Palmer.

The rules that govern every session

Invent nothing: every factual claim traces to the Claims Register (01_EVIDENCE/Claims_Register.md, entries A1 through G21, each dated and sourced) or carries a founder-estimate label. Documents are prose; chat updates are bullets, one item per line, one next action at a time. Plain language for Dennis, no unexplained acronyms. Band PDFs render through tools/md2pdf.py, which enforces a 12-millimeter top margin with an embedded gate that hard-fails ink in the top strip. The Word edition embeds diagrams as PNGs (cairosvg renders them from 02_PROGRAM/DIAGRAMS). Founder-authored material lands in 09_QUARANTINE and is audited before adoption; external references go to 01_EVIDENCE/REFERENCE. Every deliverable gets visual verification before it is called done: rasterize, check margins and blanks, eyeball or brand-color-signature the diagram pages, refresh the contact sheets in 07_BUILDLOG/qc. The outputs mirror is a full tree copy via tar (the mount throws intermittent input-output errors; commit to git first, then retry the mirror).

Where things stand

Both program decisions answered July 13. Question 9, school fees: excluded at launch, definitely; the founder is researching whether pay-then-reimburse avoids the school joint agreement entirely; the register's Riverside reading (G7) says a thin agreement survives; bond counsel resolves if reopened. Question 10, the platform: each project or annexation carries its own note; the warehouse line and the credit facility are one instrument; it funds everything until the optional bond take-out once properties stabilize. INS-301 (Participating Public Agency Guide) is at v0.99: ten chapters, nine appendices including the worked example and annual calendar, eight diagrams, six bannered sample instruments, 36 crosswalked claim families, both editions verified. Whitepaper v1.1 carries the confirmed platform as section 11. INS-302 Developer Guide shipped v1.0; INS-303 Investor Guide outline is unlocked for drafting; INS-304 (city-staff implementation guide) is reserved and planned.

Open items, in rough order

Question 11: whether the Administration Agreement splits from the Participation Agreement (Build Log). The founder's school-agreement research (above). Trademark: Option A definition from Palmer, TSDR recheck on serial 98837494 around July 26; FeeRoll and TractRoll sit clean on the bench. DCF workbook: two known formula bugs flagged, correction awaiting Palmer's go-ahead (the guide's worked example deliberately computed fresh). Professional bench: Brad Neill at Stradling is bond counsel, already in conversation; Webb Municipal Finance is the consultant candidate; sequence is Brad first, then Webb with his endorsement, per the quarantined founder memos. Dennis still owes: manual policy numbers, entity confirmation, minimum deal size, program email address, and his merge or edit of the INS-301 draft (his Google Doc remains source of truth until he adopts).

Mechanics a new session needs

GitHub: github.com/Obviouslyobvi/Insite, public, master. Push flow: git bundle from master only, copied to outputs as insite-pushN.zip; Palmer clones the zip locally and pushes with his two commands; exactly one push zip lives in outputs at a time. Live pages ride raw.githack.com paths (cache busts with a query string). The checklist (00_PLAN/INSITE_Build_Checklist.md) has its own PDF pipeline with checkbox styling; never regenerate it through md2pdf. Google Drive fetch works for Dennis's Docs; his export pipeline has produced two blank files, so fetch the Doc directly when a copy looks empty. TODO.txt is the live task list; the Build Log holds decisions and the question batch; the Delivery Order sequences what Dennis sees and when.

INSITE™ is a pre-launch program concept administered by HGF Management Company. This material is not an offer of financing, legal advice, or investment advice. Program structure, eligibility, costs, and pricing are subject to issuer approval, bond counsel review, and program underwriting. Figures identified as targets or estimates are the founder's working numbers, not commitments.
